RE: Site and Soil Evaluation For Proposed Septic System
Logan Road, Java, VA – Halifax County
Tax Map# 31768; 10 Acres

Dear Mr. Legg,

At your request, I have evaluated the site and soil conditions at the above referenced property for the ability to install an onsite sewage disposal system. The site has been evaluated based upon current Virginia Department of Health Regulations.

My evaluation indicates that the site and soils are suitable for the installation of a “conventional” drainfield. This assumes a maximum daily flow of 600 GPD (4 Bedrooms). Conveyance of the effluent from the septic tank to the drainfield will most likely be through gravity fall.

It is advised that the VDH would be the regulation agency on this property and would issue the final approval on any design submitted. During the field investigation, areas of exposed rock pinnacles were observed at the ground surface. This geologic feature could potentially affect the location and/or the construction of the drainfield at the time of installation.

This information does not serve as permission to construct a septic system. A formal permit design package can be prepared at your request and must be approved by the local health department prior to construction.

Hill Environmental & Engineering Services, PLLC. appreciates the opportunity to serve as your soil consultant on this project. Please do not hesitate to contact me if you have any questions regarding this letter.

Sincerely,

Shannon D. Hill; LPSS, AOSE
Licensed Professional Soil Scientist/Alternative Onsite Soil Evaluator
